Eisenhower Matrix

	Urgent	**Not Urgent**
Important	**Do:** I. Create the boilerplate for the VS Code extension in TypeScript. II. Integrate HyperSnips and compile basic LaTeX snippets. III. Integrate LaTeX Workshop for live .PDF preview. IV. Configure Tectonic compilation for .PDF output. V. Installation instructions	**Schedule:** I. Expand the snippet library via real assignment use, using Python for dynamics. II. Ensure extension workspace setup is repeatable and does not override user settings. III. Implement visual symbol replacement within the source editor. IV. Edit autoindentation settings for beautification of code.
Less Important	**Reuse:** I. Utilise HyperSnips and .hsnip instead of custom snippet engine architecture. II. Use LaTeX Workshop for live .PDF viewing inside the side tab. III. Integrate Tectonic for compiling tooling.	**Defer:** I. IntelliSense autocomplete of snippets. II. SymPy integration for equation-solving. III. LaTeX document boilerplate snippets, aside from mathematical notations. IV. Configuration and snippet settings page.
